

Air Steril Infection & Odour Control

FIRST MONTH FREE OF CHARGE

Odour can be due to clinical treatments, incontinence, uric acid etc. The strictest hygiene routines can often fail to remove odour issues. Air Steril kills the bacteria that causes odour leaving only clean fresh air.

1 Eliminate Odour

Odour is caused by bacteria that can multiply from 1 to 8 million in 8 hours. Air Steril kills bacteria removing the odour leaving only clean fresh air.

2 Kill Bacteria

Air Steril killed 98% of airborne bacteria in a one hour controlled test and eliminated 52% of surface bacteria. Tested by Health Protection Agency.

3 Breathe Clean Air

If you're experiencing malodour problems in your building or you are concerned about infection control call us.

How does it do it?

Quite simply, an Air Steril unit takes in bad air at one end, purifies it and releases infection free, fresh air at the other end. It uses *Photoplasma technology* and five uniquely combined processes to:

- remove all odours
- improve air quality
- kill bacteria and airborne germs
- cut cross infection
